PROFESSIONAL EXPERIENCE

BioFourmis | DevOps Engineer — Oct 2023-Present

- Developed and managed Jenkins and Spinnaker architecture from scratch and pipelines to support comprehensive CI/CD workflows throughout infrastructure for our Connect Health Care product.
- Orchestrated and optimized large-scale Kubernetes clusters to improve resource allocation, enhancing application performance and reducing infrastructure costs by 20%.
- Implemented multi-cluster monitoring and logging (Prometheus, Grafana, Loki stack) with Slack alerts.
- Proficient in managing various databases, including MongoDB, SQL, PostgreSQL, and TSDB.
- Deployed Kafka, Kafka Connect through Strimzi, AKHQ, Spark Operator and Spark Jobs for Pipeline Cluster for Production environment.
- Spearheaded Disaster Recovery (DR) implementation, enabling seamless environment restoration across AWS regions (Including backup and restore of databases).
- Optimized Redis configurations for improved latency and throughput in high-traffic environments.
- Developed and managed Kafka topics, producers, and consumers for seamless data integration.
- Monitored Kafka performance and optimized configurations for enhanced message throughput and reduced latency.
- Experienced deploying Airflow and working with Cloud data platforms like Lambda, SNS, S3, AWS Glue, Athena, RDS, ECS, RedShift.
- Experienced in troubleshooting and resolving live issues in production environment.

Copains Technologies | DevOps Engineer - Nokia — Dec 2022-Sep 2023

- Utilized Helm to deploy the Nokia NIAM (Network Identity Access Management) application and its components on the OpenShift platform for FreedomMobile, ensuring seamless integration with OpenShift features like SCC and persistent storage.
- Deployed the CDP (Customer Data Platform) application for Rakuten using Helm on OpenShift, leveraging OpenShift's project isolation, RBAC, and resource management capabilities for efficient and secure deployment for Rakuten
- Deployed new-relic marker action deployment tracker so that whenever new commit appears then this commit message can be shown as description in new-relic dashboard.
- Managed multi-tenant OpenShift clusters by utilizing project-based isolation, resource quotas, and Security Context Constraints (SCC) to ensure workload security and efficiency.
- Successfully performed an upgrade of an EKS cluster from version 1.24 to 1.25. This included upgrading the Helm charts to disable the PSP (PodSecurityPolicy) and also upgrading the aws-load-balancer-controller, aws-node-termination-handler and cluster-autoscaler components.
- Implemented multicluster monitoring (prometheus-grafana) and logging (elasticsearch-logstash-kibana) stack and alerting with alert configured in respective slack channels in the production environment.
- Orchestrated containerized applications using Docker and managed container clusters using Kubernetes for efficient scaling and deployment.
- Continuously reviewed and adjusted resource requests and limits for pods, resulting in a 10% reduction in infrastructure costs while maintaining optimal performance.
- Utilized OpenShift's Operator Framework for automating application deployment and lifecycle management. Optimized application scaling by configuring Horizontal Pod Autoscaling (HPA) based on metrics like CPU and memory usage within OpenShift.
- Implemented Role-Based Access Control (RBAC) to define granular permissions, ensuring secure access control across OpenShift projects and resources.
- Configured and enforced OpenShift Security Context Constraints (SCC) to maintain workload compliance with security policies. Integrated OpenShift with external identity providers (e.g., LDAP, OAuth) to manage user authentication and authorization.
- Configured and managed OpenShift Routes and Services to enable external access to internal applications, implementing secure connections using TLS.
- Created and maintained multiple terraform modules to manage configurations and services and automated the installation.

FEV India Pvt. Ltd. | DevOps Engineer **Oct 2021 - Dec 2022**

- Hands on experience with automation and CI tool Jenkins and configuration management tool Ansible.
- Implemented message communication between docker container as DDS paticipants by OpenDDS.

Accenture Solutions Pvt. Ltd. | Application Developer Associate **Jan 2021 - Sep 2022**

Project: INTEL CORPORATION - Intel - ADM-Analytics- APT-SPD : A ticket management project Which uses Service Now tool to monitor and access the incidents created by users, and an Autosys Dashboard to monitor hadoop jobs running in background.

- Monitored and resolved tickets incidents on ServiceNow.
- Monitored hadoop jobs on Autosys Dashboard.

CORE COMPETENCIES

Cloud - AWS, GCP
Container - Kubernetes, Docker, OpenShift
CI/CD Tool - GitHub Action, Jenkins
Infrastructure Management - Helm, Terraform, Ansible
SCM - Git, GitHub
Scripting - Python, Shell
Monitoring - Prometheus, Grafana, Loki

CERTIFICATIONS

- RedHat Certified System Administrator
- RedHat Certified Specialist in Ansible Automation

EDUCATION

2016 - 2020 | Jaipur Engineering College and Research Centre, Jaipur

B.Tech in Computer Science Engineering | 70.19%
