BHRIGU SHANDILYA

DevOps / Platform Engineer

+91 8078629855 | bhrigushandilya@gmail.com

PROFESSIONAL SUMMARY

DevOps / Platform Engineer with 5+ years of experience designing, automating, and operating multi-cloud (AWS, GCP) Kubernetes platforms on EKS supporting 80+ microservices. Skilled in GitOps delivery (ArgoCD, Helm), Infrastructure as Code (Terraform), CI/CD automation (GitHub Actions, Jenkins, Spinnaker, Chef), secrets management (HashiCorp Vault), SSO/OIDC identity integration, observability (Prometheus, Grafana, Sentry, PagerDuty), and cloud cost optimization. Proven record of reducing infrastructure costs, improving incident response, and hardening platform security across production environments.

PROFESSIONAL EXPERIENCE

NeuroDiscovery AI | DevOps Engineer

Aug 2025 - Present

- Supported deployment and monitoring of AI agents and agentic workflows, including Model Context Protocol (MCP) servers, on Kubernetes.
- Tracked LLM token usage and spend, and optimized model selection, context size, and inference configuration to balance cost and performance.
- Applied access controls, secrets management, and auditability for workloads handling sensitive data (PHI/PII), aligned with HIPAA safeguards.
- Centralized secrets management for 45+ microservices using HashiCorp Vault, eliminating hardcoded credentials across EKS workloads (including LLM provider API keys) and strengthening platform security.
- Authored and maintained Helm charts for 45+ microservices, standardizing Kubernetes deployment patterns and supporting consistent application delivery.
- Established end-to-end CI/CD workflows using Chef (Client, Workstation, Server) and GitHub Actions to deploy microservices.
- Provisioned complete AWS infrastructure (VPC, EKS, RDS, DocumentDB, Redis) using Terraform.
- Delivered GitOps-based continuous delivery using GitHub Actions and ArgoCD for Kubernetes workloads.
- Integrated self-hosted Sentry with PagerDuty, configuring a tiered escalation policy to reduce incident response time in production.
- Built a serverless AWS cost-reporting pipeline (Lambda, Cost Explorer API, EventBridge) delivering daily cost breakdowns to Slack, and configured AWS Budgets and Cost Anomaly Detection for proactive spend monitoring.
- Extended cost visibility to GCP via BigQuery billing export, enabling unified cross-cloud cost tracking during the AWS migration.
- Rolled out Google OAuth (OIDC) SSO across ArgoCD, Vault, Grafana, Sentry, and Gitea, centralizing authentication for internal platform tools.
- Streamlined Docker-based workflows and scripts to maintain continuous execution of operational tasks.
- Worked with GCP services (Cloud Run, IAM, Firewall) and drove migration of GCP resources to AWS.
- Administered and modernized Mac Studio fleet services running on Docker Desktop and Homebrew, including CI/CD, alerting, and monitoring stack.

BioFourmis | DevOps Engineer

Oct 2023 - Aug 2025

- Developed and maintained Jenkins and Spinnaker architecture from scratch, building CI/CD pipelines across infrastructure for the Connect Health Care product.
- Orchestrated and fine-tuned large-scale Kubernetes clusters, improving resource allocation and reducing infrastructure costs by 20%.
- Set up multi-cluster monitoring and logging (Prometheus, Grafana, Loki) with Slack alerting.
- Oversaw multiple database systems in production, including MongoDB, SQL, PostgreSQL, and TSDB.
- Deployed Kafka and Kafka Connect via Strimzi, AKHQ, and Spark Operator/Spark jobs for the production pipeline cluster.
- Upgraded an EKS cluster with minimal downtime, including the aws-load-balancer-controller, aws-node-termination-handler, and cluster-autoscaler components.
- Configured Horizontal Pod Autoscaling (HPA) based on CPU and memory metrics to improve application scaling.
- Enforced Role-Based Access Control (RBAC) using Roles, ClusterRoles, and RoleBindings for granular, secure access across clusters.
- Spearheaded Disaster Recovery (DR) implementation, enabling seamless environment restoration and database backup/restore across AWS regions.
- Tuned Redis configurations for improved latency and throughput in high-traffic environments.
- Developed and maintained Kafka topics, producers, and consumers, refining configurations for higher throughput and reduced latency.
- Deployed Airflow and integrated cloud data platforms including Lambda, SNS, S3, AWS Glue, Athena, RDS, ECS, and Redshift.
- Troubleshot and addressed live production issues across the platform.
- Engineered and maintained Terraform modules for configuration and service management, streamlining installation via Jenkins pipelines.
- Directed high-level migration of multiple EKS clusters from one AWS organization to another.

Copains Technologies (Nokia) | DevOps Engineer — Dec 2022 - Sep 2023

- Deployed the Nokia NIAM (Network Identity Access Management) application and its components on OpenShift for FreedomMobile using Helm, integrating OpenShift features such as SCC and persistent storage.
- Deployed the CDP (Customer Data Platform) application for Rakuten using Helm on OpenShift, leveraging project isolation, RBAC, and resource management for secure, efficient delivery.
- Built a New Relic marker/deployment tracker so new commit messages automatically appear as deployment descriptions on the New Relic dashboard.
- Administered multi-tenant OpenShift clusters using project-based isolation, resource quotas, RBAC, and Security Context Constraints (SCC); integrated OpenShift with external identity providers (LDAP, OAuth) for authentication and authorization.
- Automated application deployment and lifecycle management with the OpenShift Operator Framework and configured Horizontal Pod Autoscaling (HPA) on CPU and memory metrics for optimal scaling.
- Configured OpenShift Routes and Services with TLS to provide secure external access to internal applications.
- Upgraded an EKS cluster from 1.24 to 1.25, updating Helm charts to disable PSP (PodSecurityPolicy) and upgrading the aws-load-balancer-controller, aws-node-termination-handler, and cluster-autoscaler components.
- Implemented multi-cluster monitoring (Prometheus, Grafana) and logging (Elasticsearch, Logstash, Kibana) with alerts routed to dedicated Slack channels in production.
- Orchestrated containerized applications with Docker and Kubernetes for efficient scaling and deployment; tuned pod resource requests and limits, reducing infrastructure costs by 10% while maintaining performance.
- Created and maintained Terraform modules to manage configurations and services and automate installation.

FEV India Pvt. Ltd. | DevOps Engineer — Oct 2021 - Dec 2022

- Streamlined build and deployment workflows using Jenkins and configuration management with Ansible.
- Enabled message communication between Docker containers as DDS participants using OpenDDS.

Accenture Solutions Pvt. Ltd. | Application Developer Associate — Jan 2021 - Sep 2021

Project: Intel Corporation - ADM-Analytics-APT-SPD, a ticket management system using ServiceNow to monitor and triage user-reported incidents and an Autosys dashboard to monitor background Hadoop jobs.

- Monitored and closed incident tickets on ServiceNow.
- Monitored Hadoop jobs via the Autosys dashboard.

TECHNICAL SKILLS

Cloud Platforms: AWS (EKS, RDS, S3, Lambda, CloudFront, ALB/NLB, IAM), GCP (Cloud Run, IAM, Firewall, Load Balancer)

Containers & Orchestration: Kubernetes, Docker, Helm, ArgoCD, OpenShift, Karpenter

LLMOps & AI Platform: LLM gateways (routing, rate limiting, caching, failover), prompt management/versioning/evaluation, model serving, AI agents and MCP, token and cost tracking

CI/CD & GitOps: GitHub Actions, Jenkins, Spinnaker, Chef (Client/Workstation/Server), ArgoCD

Infrastructure as Code: Terraform, Ansible

Security & Identity: HashiCorp Vault, RBAC, SCC, IAM, OAuth/OIDC SSO

Monitoring & Incident Management: Prometheus, Grafana, Loki, Sentry, PagerDuty, Uptime Kuma

Data & Messaging: Kafka, Kafka Connect (Strimzi), AKHQ, Spark, Airflow, AWS Glue, Athena, Redshift

Databases: PostgreSQL, MongoDB, Redis, DocumentDB, TSDB

CERTIFICATIONS

- Red Hat Certified System Administrator (RHCSA)
- Red Hat Certified Specialist in Ansible Automation

EDUCATION

B.Tech in Computer Science Engineering — Jaipur Engineering College and Research Centre, Jaipur (2016 - 2020)

AWARDS

Archimed Spotlight Award - Ametris (Acquisition from BioFourmis)
